(Note 1) You must use the MSP starter drill when using the MSE drill.

(Note 2) Change cutting conditions depending on your machine and workpiece rigidity.

(Note 3) When machining holes over 5DC, reduce the step stated above.

(Note 4) The use of water-soluble fluid (diluted by 20 times) is recommended for drilling under the cutting conditions above. Lower the revolutions if you use oil fluid or mist.

(Note 5) For the spindle revolution of diameters not shown in the table, please adjust to the conditions of larger and closest diameter, or calculate from the cutting speed of the closest diameter. For the feed rate per revolution, please set up within the recommended feed rate of the closest diameter appropriately.
